

CIRCUIT BREAKER (fuse box) (electrical panel)

The circuit breaker panel is located in the basement of the townhouse. In one-bedroom townhouses without basements, is located in the utility room.

All circuit breakers provided by the Cooperative are 110 volts.

Any other circuit breakers are considered personal property of the Member.

Any alterations or additions to a current circuit or to the breaker panel must be done in accordance with all electrical and building codes. Work must be performed by a licensed contractor.

An Installation/Alteration Permit must be completed by the Member and approved before work begins.
