

## TUB WALLS

The tub/tub wall is composed of fiber glass.

- Clean them regularly but avoid harsh cleansers that might scratch the surface.
- If the tub or tub wall caulking is cracked or loose from the wall or floor, contact Maintenance immediately.
- Proper replacement of the caulking will prevent water damage to the floor or wall. Failure to report and if floor or wall damage occurs, Members will be responsible for the repair or replacement.
- The caulk seam will last much longer if the shower water is directed toward the bottom of the tub.
- Cleaning tub/tub wall, soap holders, and other bath accessories is the Member's responsibility.
