

WATER HEATER

Each townhouse has a 40-gallon gas water heater.

Keep the area around the water heater clear (3 feet) of all objects. Never lay items on top or lean anything against the water heater.

If the water heater is leaking, contact Maintenance immediately.

ENERGY TIPS:

- Turn the water heater down whenever you are going to be gone for more than 7 days.
- If water faucets drip when fully turned off, contact Maintenance immediately.
- Keep the heat setting on the water heater turned to average or below.
